

# Models of Division

$$310 \div 5$$

Area Model

$$60 + 2 = 62$$

Partial Quotient

$$\begin{array}{r} 5 \overline{) 310} \\ \underline{-300} \phantom{0} \\ 10 \\ \underline{-10} \\ 0 \end{array} \quad \begin{array}{l} 5 \times 60 = 300 \\ 5 \times 2 = 10 \end{array}$$

$$60 + 2 = 62$$

Standard Algorithm

$$\begin{array}{r} 62 \\ 5 \overline{) 310} \\ \underline{-30} \phantom{0} \\ 10 \\ \underline{-10} \\ 0 \end{array}$$
